PROFESSIONAL SUMMARY

Computer Science undergraduate with a strong foundation in C, Java, and Data Structures & Algorithms, and hands-on experience contributing to a full-stack AI/ML fraud detection prototype. Comfortable working across backend development and machine learning model integration. Seeking software engineering internship opportunities to apply technical skills on production-grade systems.

EDUCATION

Bachelor of Technology in Computer Software Engineering

Technocrats Institute of Technology & Science (TIT Group), Bhopal, Madhya Pradesh

Expected Graduation: August 2027 | Current Year: 3rd Year

Relevant Coursework: Data Structures, Algorithms, Object-Oriented Programming, Database Management, Machine Learning

TECHNICAL SKILLS

Programming Languages: C, Java, Python

Software Development: Object-Oriented Programming, Data Structures & Algorithms (Arrays, Trees, Graphs, Sorting, Searching), API Development

Backend: FastAPI, RESTful APIs, PostgreSQL, Redis | **Frontend:** React.js, HTML, CSS, JavaScript

Machine Learning: XGBoost, LightGBM, Isolation Forest, Autoencoders (PyTorch)

Version Control & Cloud: Git, GitHub, Docker, SAP BTP (Cloud Platform)

Soft Skills: Communication, Team Collaboration, Analytical Thinking, Time Management

KEY PROJECTS

AI-Powered Digital Fraud Detection System | *Academic Team Project (5 members)* | *Python, FastAPI, XGBoost, LightGBM, PyTorch, React.js, PostgreSQL, Redis, Docker*

- Collaborated with a 5-member team, guided by faculty, to design and prototype a real-time AI/ML system for detecting fraud in digital payment transactions (UPI, card, online banking)
- Contributed to backend development using FastAPI with PostgreSQL and Redis, supporting a pipeline that computes 40+ engineered features per transaction for risk scoring
- Helped integrate an ensemble of ML models (XGBoost, LightGBM, Isolation Forest, Autoencoder) to generate a calibrated 0–100 fraud risk score per transaction, targeting sub-100ms scoring latency
- Contributed to a 3-tier decision framework (auto-approve / MFA step-up / block-and-escalate) that reduced false positives by 61% versus a rule-based baseline in project testing
- Performed manual functional testing of API endpoints and model outputs to validate transaction scoring behavior before demo

ADDITIONAL INFORMATION

Languages: English (Professional), Hindi (Native) | **Interests:** Competitive Programming, System Design, AI/ML Applications | Available for internships
